

Hey!

Nils Mehlhorn

Software Engineer adesso AG

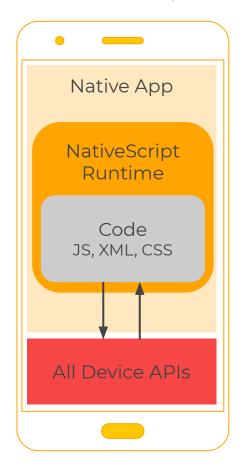

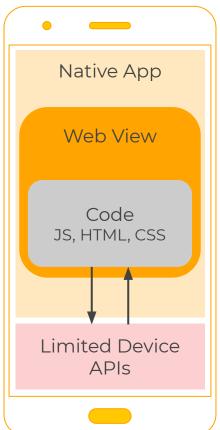

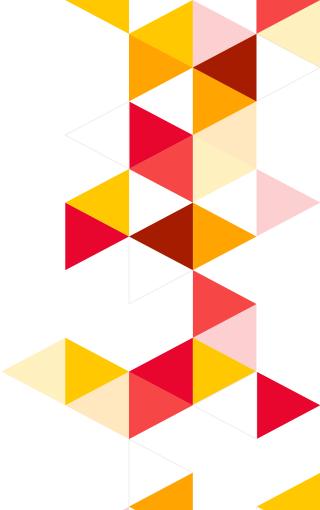

Beautiful, accessible, platform-native UI - without WebViews. Define once and let NativeScript adapt to run everywhere.

NativeScript

Hybrid Apps (Cordova, PhoneGap)

Accessing Device APIs

native

NativeScript

iOS	let btn = UIButton();	var btn = new UIButton()
Android	Button btn = new Button(context());	var btn = new android.widget.Button(context())
Module (Both)		var btn = new Button()

Angular for NativeScript

Framework in Framework

Angular Everywhere

"NativeScript doesn't require Angular, but it's even better when you use it."

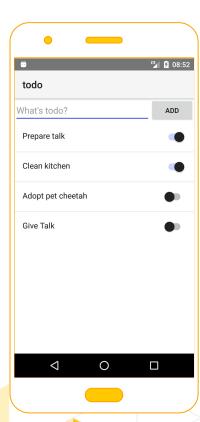

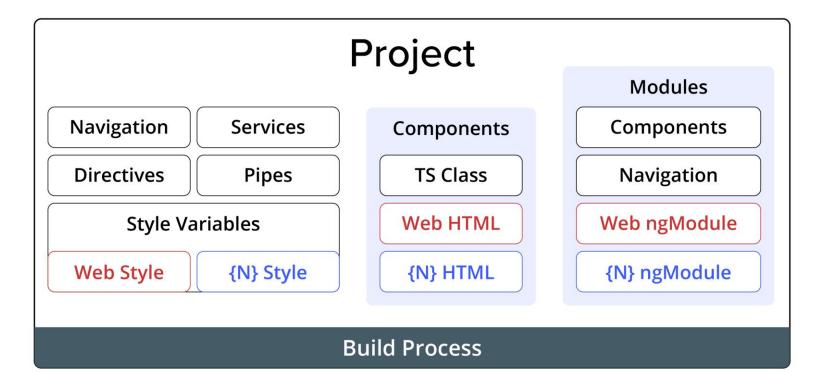

Hands-on?

NativeScript Playground

Sebastian Witalec. Apps That Work Natively on the Web and Mobile. Angular Blog. https://blog.angular.io/apps-that-work-natively-on-the-web-and-mobile-9b26852495e7

Hands-on!

Considerations

- Platform-agnostic & modular architecture required
- How similar can/should it be?
- Increased project complexity

ng add @nativescript/schematics won't solve everything for you

- TypeScript, RxJS
- Modules, Pipes,Guards
- Dependency Injection
- Universal Integration

Share Even More Code

Thanks!
